

Robert M. Ryan, P.E. background includes dam engineering, providing a valuable asset for dam owners with guidance on repair and maintenance needs, and compliance reporting with the Massachusetts Office of Dam Safety (ODS).

RM Ryan Earthworks provides dam maintenance services for private and State owned dams. Projects include minor slope protection repair, flashboard gantry installation, overflow pipe installation, and steel resurfacing. Particularly unique, we installed a beaver deceiver, allowing passage of water even after beavers plug up the spillway.

We provide annual maintenance services for the ODS at multiple State owned dams and flood control sights. Activities include slope mowing, weed control, fallen tree removals, beaver debris removal, slope protection repairs, and concrete repairs.
